eds of transportation changes will eight weeks. also be male in reads. There is sure to be an influence on the social life traced to three methods of highway Improvement.

The home that is located on a well improved highway is always more attractive; It is vorth more when put upon the real estate market and It is a more pleasant place to live because the social intercourse between the neighburs and the town which must always be a social center, is more free. There is less isolation and this is what makes life in the country really worth while. The farm home that is well improved, that is equipprd as such lomes may be now days. that is located ou a highway which nuts the town and town friends almest next deer to you, leaves little to be desired.

There is still another point in connection with the good road, and that is the attractiveness of a well kept hard road b d. Who has not seen from the car window a long smooth read reaching out into the country bounded en all sides by green pastures or well kept fields passing over gentle hills and through shaded valleys leading ever onward? Such a than the fork is wide. In one edge road exerts an influence that is unmistakable, calling the automobile enthuslast and the one who loves to them in about three inches. One be out of coers beekoning him to edge of the board is beyeled. After come out and speed over the hard, the coarse manne is thrown out this smooth, flooti he highway. On such a scraper will be found handy in gatherroad every tern offers new enchantment. Every change of scene offers new blending, and adjustments of color effect. Sorely the well kept read is "a thing of heauty and a joy for-

Prevent Road Trouble.

Careful use of a orag on a dirt road that is already in reasonably good cendition, will almost entirely prevent trouble from rats, mud holes or dust, and give zeed service at low cost.

ews before her udder has become

Better for Progeny and for Animal Herself to Have Resting Period of Few Weeks.

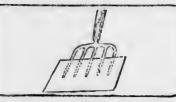

Some cows are such persistent milkrs that it is next to impossible to dry them up even for a short time. says the Farmers' Digest, When a cow nersists in milklug from one lactatien period to another, it is better to milk her than to take any chances en forcing her dry. There is much danfer in injuring the cow's udder if she is forced dry and we have found it the safer plan to milk the animal from one lactation period to the next Notwhilstanding. It is better for the to have a resting period of six to the next year, although it is best to

A enreful observer will usually find that from eight to ten weeks before of a constantity that can be directly fealving the cow will have a strong tendency to ston giving milk. If the milker takes advantage of this time, there is usually very little trouble in getting an animal dry nut If she passes by this period, a persistent milker is difficult to dry up.

WALLPAPER, AT ROARK'S 5c. PER ROLL UP

Electric Light is the Most Economical Light

VERYBODY knows the advantage of electric light-its cool, clean convenience-its brilliancy and purity of color—its hygienie value. llut do you know that it is also the least expensive of the various kinds of light available for homes, offices, stores, public halls and interiors in general?

The many advantages of electric light are fully appreciated only by those who use it. Likewise only those who use Edison Mazda Lamps have electric light at minimum cost.

CATARRH OF THE THROAT

is Liable to Produce Catarrhal Deafness

Rapids, iowa, writes Sher time ago t wrote you abou age. He was troubled with his ears. They were very sentitive to the touch million and quited at at that s. He tremed to be worse after catching rold. I had tak in him to ductors, but blow, and I was very much afraid b would be a like hearing cathrely. He d af every day. entirely cured. It has now well and hearty and can hear perfectly."

Catarrh Causes Many Diseases. Many diseases are caused by taking A cold is v ry likely to settle in the nose, causing masal catarrh. t may settle in the upper part of the throat, called the nasal pharyngeal space. In this space are two little tubes called curtachlan tubes, that

lead to the middle car. If the catarrh settles in the pharyngeal space it may follow the mucous membrane through the eustachian tubes late the middle car. If it does It will cause noises in the ear, and later on be sure to cause deafness. Catarrh of the thront may follow the custachlan tubes up into the midde car without causing much concern

earing before he knows it. For instance, suppose a man can I he loses his hearing to the extent hat he can only hear the tick of his suspect it at all. His hearing is ad chough for ordinary purposes. o goes on without the slightest suslebu that he is losing his hearing e may have ringing in the ear, or ackling and snapping sounds in the ir, or a feeling of pressure in the , let he is not aware that he is ng his hearing.

Testing the Hearing. It has good thing to test your hearvith a watch. First hold the the against your ear, then move it My away from the ear and see now far away from the watch you am actually hear it tick. Try it on are alike. If you find that you are unable to hear the watch on both sides from the ear, you may know deafness has already begun. should begin taking Peruna at once. Gargle the throat with cold, strong sait water, as directed in the "Ills of Life," sent free by Peruna Co., Co-lumbus, Ohlo. Persist in this treatment until a cure is effected.

The Best Way to Gargle. Sometimes catarrh of the nasa' pharyngeal space will cause an acmulation of secretions in the throat, hat completely fill the space. Unless these secretions are promptly remay be formed. Once formed the polypl or adenoids, as they are someimes called, will require a long time with the gargling to remove. Gargling according to the proper method will sometimes remove polypi or adenotes, and no surgical operation is required.

In order to understand exactly what is meant by proper gargling send a free copy of the "Ilis of Life." Peruna must be taken according to directions on the bottle.

People who object to liquid medi en the part of the patient. The par- cines can now obtain Peruna Tablets

cial machine lilustrated is designed to piant the sceds either in squares or in triangles, though it could easily be modified to plant them in circles, hexagons, rectangles, or any other desired

BEAUTY OF THE HYDRANGEAS

Considered Best Late Flowering and Hardy Shrub-Easy of Culture and Attractive.

(By C. M. SCHULTZ.)
It is likely that if a vote were to be taken for the best late flowering hardy shrub the honor would fail to the llydrangea.

While there are shrubs that I like better, this one seems to suit tho masses. It has the merit of extreme hardiness, easy culture, great floriferourness, late blooming and per-

Its flowers iose their early whiteness as the season advances, but in their pinkybrown stage they are not without attractiveness.

in planting the llydrangea, I would never advise using it singly. It is vastly more effective when grouped. By this means we secure for it a strength and dignity which single specimens never have. Planted thick-

ly it produces a grand effect. The enormous heads of the bloom have considerable weight, but they cause the branches to lake a graceful curve, and seldom if ever need supporting.

Those who are in search of a plant that will grow in almost any soil and under aimost any condition, and Is equally beautiful in the south and the north, will find the llydrangea the very thing they are looking for.

Manure Is Money.

Manure is money. There is no discounting the conclusion, and any landowner who doesn't believe it by the way he robs his soil is making a great mistake that will soon stare hlm in the face. All soll is depicted sooner or later, and that farm comes to the turn soonest to which nothing ls given back.

Preserve Cut Flowers.

Cut flowers may he preserved for an unusually long time If a little saltpeter or carbonate of soda is added to the water. Salt also helps to keep the way to town makes a big differ

RAISE GEESE ON FARM

Vacant Places Unfit for Cultivation Quite Suitable.

USE FOR ALL WASTE FRUIT Fowls Occupy Same Place Among Poultry That Sheep Do Among Live Stock and If Given Care Are Profitable in Proportion.

> Contrary to common belief, geese mature just as rapidly away from streams or ponds as near them. A generous supply of fresh drinking water is all that is required. There are many places on a farm worthless for cultivation that could be used with ex-

> cellent results for geese raising. The cost of food for geese is proportionately small in comparison with other birds bred for market. A goose on range will cat grass, insects and other animal and vegetable matter found in the lieids.

> Geese occupy the same place among ponitry that sheep do among live stock and if given proper care are as prolitable in proportion, says a writer in the Baitimore American. it is just as necessary to pinck the feathers from a goose as to shear the wool from the sheep, and the product has a great demand. The feathers may be picked four times during the summer, and each goose of the larger breeds will yield about two pounds of line, soft, downy feathers.

> For the best results I feed my geese an egg-producing food, consisting of four measures of wheat bran, two

An Excellent Trlo.

measures of shorts, one measure of beef scrap, one measure of oll meal and one-baif measure of sharp sand. w my people to hatch their own eggs, because they are so clumsy that they break them, besides I wish to keep them laying all the time.

Though more geese were raised last year than ever before, yet the markets are not oversupulled and the demand Is growing all the time. Geese mature very rapidly and attain an enormous

The young are hardy and easy to raise. After they are five days old tbey should be left to find their own feed on the range and requiro no caro except shelter during severe rainstorms and at night until feathered out. They live to be very old. Some breeders report them living and doing well at twenty years of age. Another Important fact about them is that they are not susceptible to disease, this in contrast to most poultry.

HOW YOUNG CHICKS ARE FED

Wisconsin Expert Gives Method Em pioyed at the University in Caring for Little Feilows.

"For the first 10 to 14 days, wo feed the chicks at the university farm a little commercial chick feed, which is thrown into a fairly deep litetr of bay chaff three or four times use." a day," writes Prof. J. G. Halpin of the College of Agriculture of the University of Wisconsin in reply to a question regarding the feeding of young chicks.

"In the middle of the forenoon and the afternoon," says l'rofessor Halpin, "we feed a little mash made up of equal parts of coarse ground corn. wheat bran, wheat middlings, and rolled oats. Once a day we mix a raw egg in with this mash, one egg for about each 60 chlcks. As they get older, we gradually increase the amount of raw egg, adding enough water or, better still, mlik to keep the mash from being sticky and soggy. As fast as they learn to eat it, wo mix more and more wheat and cracked corn into the chick feed, so that by the time they are three weeks old they are enting cracked corn and wheat entirely. From the start we give access to dry mash made up at first like the wet mash, except that the rolled oats is omitted

after the second week. "Fine sand on the brooder floor, covered with sbort cut Alfalfa hay, is ideal. Ground bone in little hoppers, so the chicks can help themselves, is also good. A few drops of potassium permangnate stock solutlen, just enough to turn the water red, or just enough Zenoleum to turn the water whitish, may be put into the drinking water."

Watch the Chicks. Keep close watch of the little chicks

during this hot weather and see that they are not troubled with head ilce, especially those that run with the

Protect the Eggs. The steedy rays of the sun will soon cook an egg these days. A canvao cover for the egg basket or erate on

WHO SHALL DRAG THE ROADS?

Somewhere Between Two Extremities of Opinion Lies Ultimate Solution of Vexed Problem.

There is a serious difference of epition among authorities as 10 whether or not the responsibility for dragging roads rests solely upon the farmer's shoulders. Here, for instance, is one of the three members of the recently appointed state highway commission of lowa declaring: "Take the road work out of the farmers' hands. It is not tair to the farmer to make him work on the roads. Now, I am a farmer myself, I pay my read taxes in money. There is no reason why a farmer should get out and work on the roads any more than should a banker. Then, too, road making is becoming too much of a business to let anybody and everybedy practice It. One man should have supervision of the road work." And here, on the other hand, is one of the leading newspapers of the same state, a long and ardent champion of good roads, declaring:

"Guthrie county men dragged a highway across the country in an hour and a haif the other day. The dragging bee had been arranged for and was pulled off on schedule. It reminds of a story told by Jim Fisk, one of the early magnates and mililienaires. He was the son of a shrewd old New England farmer. One day the old man told Jlm that if he would clean the stables well he would pay him a gold dollar for the service. Jim, with the golden reward in sight. tugged and stranged and finished the stable on time. Ilis father gave him the deliar. Then he sald: 'James, if you can clean the stables one day for a dollar, you can elean them every day as a duty.' And thereafter James cleaned out the stables.

"If Guthrie county, and other coun-I give them a small quantity of this ties, can drag the principal highways food twice daily and allow them free of the county in an hour and n half with a hurrah and to show what can be done, they can drag the principal roads after a rain as a duty. An ar rangement so successful as this should suggest a permanent system. The gratiliention with which those road draggers turned to survey their completed work ought to teach them that

Beautiful Country Road in Southern

a good road is a joy forever. If It is worth making as an object lesson, It is worth mainthining for everyday

Somewhere between the two extremities of opinion (turning the work over to experts and making the farmer do it all by himself) lies the uitlmate and the satisfactory solution of the vexatious problem, says the lowa-Homestend. There is no denying that road making has become as much of a science and a profession as farming Itself, or teaching school, or running a bank or piloting a locomotive. Why, then, should the farmer be expected to be the sole and only road maker and repairer, any more than the school teacher or the rurai mali carrier? Yet, on the other hand, the farmer has the first-hand, direct information of what reads need most to be made or repaired. He travels them most frequently; he should ussist in bringing them to that state of permanency which will minimize his own troubles en route between farm

in the last analysis, successful road making derends upon harmonious cooperation between individuals and county, state and national authorities. We may not have reached the stage when state aid to the extent of many militions of dollars is advisable, but we certainly have reached the stage when the burden should be taken from the unsupported shoulders of the farmer, where it has rested all too long. The farmer is perfectly willing to do his share; he simply objects to a hoggish policy which makes his share all the work and none of the eredit or reward

Goed Lawn Mixture.

Forty pounds of blue grass, three pounds of white clover and three pounds of solid red top make a good lawn mixture. The white clover and red top grow quickly and are gradually erowded out by the blue grass, which makes a much Letter lawn. Be spre that the lawn is linely raked and the goil is in the very linest condition of tilth before sowing any seed
